ALEXANDRIA DIVISION

LACAZE LAND DEVELOPMENT, LLC  
*Plaintiff*

v.

CIVIL ACTION NO.: 1:19-cv-01477

DEERE & COMPANY, INC. and  
W. L. DOGGETT, LLC d/b/a  
DOGGETT MACHINERY SERVICES  
*Defendants*

CHIEF JUDGE DEE D. DRELL  
MAG. JUDGE PEREZ-MONTES

\*\*\*\*\*

AFFIDAVIT

STATE OF WISCONSIN

COUNTY OF GRANT

BEFORE ME, the undersigned Notary Public, personally came and appeared:

STEVEN M. WIENKES

who, being known to me, after being duly sworn, did depose and say that:

1. I am of sound mind and a person of the full age of majority.
2. I have personal knowledge of the facts contained herein.
3. I am currently serving as a Manager over Product Safety for John Deere Construction & Forestry Company ("Deere").
4. I have been employed in this position for three years.
5. I have enclosed as Exhibit 1 to this affidavit true and correct copies of my December 1, 2020 expert report for this matter, which was prepared at the request of my employer.

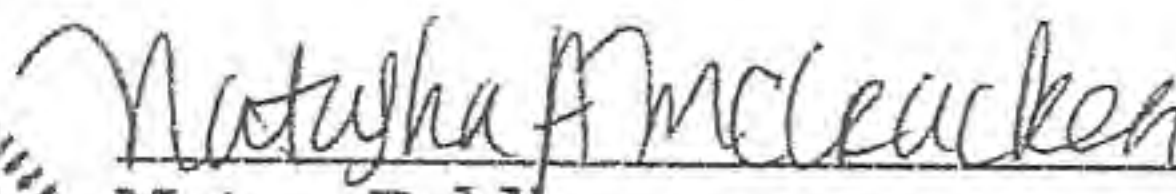

6. I have enclosed as Exhibit 2 *in globo* to this affidavit PDF copies of the JDLink data that was obtained from the 2018 John Deere 333G Skid Steer PIN: 1T0333GMLJF326996, owned by Plaintiff, Lacaze Land Development, which are referenced within my report and my deposition testimony. This JDLink data is automatically logged by the machine and maintained by Deere in the course of its regularly conducted business activities.

7. I have enclosed as Exhibit 3 to this affidavit a true and correct copy of the John Deere 333G Skid Steer operator's manual. This operator's manual is prepared and published, and kept by Deere in the course of its regularly conducted business, and the creation of operator's manual is a regular practice of Deere.

  
STEVEN M. WIENKES

SWORN TO AND SUBSCRIBED BEFORE ME, the undersigned Notary Public, on this 25 day of January, 2021 in Grant Co. Wisconsin.

  
Notary Public  
Printed name of Notary Public: Natasha A. McCreacken  
Notary Identification No: \_\_\_\_\_  
My commission expires 8-14-23

**Steven M Wienkes**  
Manager, Product Safety  
John Deere Construction & Forestry Division

December 01, 2020

Paul M. Lavelle  
Cotten Schmidt LLP  
650 Poydras Street, Suite 1950  
New Orleans, Louisiana 70130

**Re: Lacaze v. Deere & Company**

Dear Mr. Lavelle,

This report summarizes my findings and opinions in the case of Lacaze vs. Deere & Company, based on the information and documentation available to date.

**Qualifications and Work Experience**

I am currently employed as a Manager of Product Safety for John Deere Construction and Forestry Company. I have a Bachelor of Science degree in Mechanical Engineering, obtained in 1981 from the University of Wisconsin. In addition, I have accumulated 36 years of industry experience employed by Caterpillar Tractor Company, Leach Company, Federal Signal Company, John Deere Construction and Forestry Company, and owning a business, Environmental Equipment Solutions/Services, LLC. My responsibilities include supporting multiple product lines with product safety analysis and standards compliance, as well as the investigation of incidents involving construction and forestry machines relative to personal injury, fire, and/or property damages. I am familiar with the workings and standards of a number of professional associations including Society of Automotive Engineers (SAE), National Association of Fire Investigators (NAFI), American Society of Safety Engineers (ASSE), National Safety Council (NSC), and Waste Equipment Technology Association (WASTEC).

Attached as Exhibit 1 is a copy of my curriculum vitae and testimony list.

No additional compensation has or will be provided as a result of my work in this matter. This activity is part of my responsibility as Manager of Product Safety.

### **Materials Reviewed**

- Lawsuit and pleading documents regarding this matter
- Discovery documents including Interrogatories, Requests for Production and related responses
- Mr. Lacaze Deposition transcript
- Lacaze Land Development public social media
- Inspection of the 333G machine and attachment at issue in this matter
- Photographs of the 333G machine
- JDLink data
- 333G fluid samples
- Machine manuals for the 333G and attachment
- Equipment brochures
- Safety, Maintenance and Operator Video (SMO)

### **Condition of the 333G and attachment**

On October 15, 2020, I attended an inspection of the 333G machine and mulching attachment involved in this matter. The severe duty guarding package as identified in the purchase document was on the machine. In the first glance, it was obvious the rear bumper had sustained significant damage from a likely rear impact. The severe duty bumper was pushed into the rear door causing the door to enter the cooling fan space. The fan showed some interference damage. With the rear bumper containing most of the damage to the right of center, the DEF fill door was compromised. The DEF fill area was vulnerable to debris since the door function was limited.

Opening the engine compartment cover exposed an empty coolant reservoir. There was debris of various size and type spread around the engine compartment. Pulling the engine oil dipstick showed low oil level. Removing the air filter housing cover allowed a view of the air filter which was well overdue to be replaced. Debris had collected around the top portion of the cooling package. Removing the engine compartment side panels allowed a larger portion of the cooling package to be visible. Portions of which appeared to have been covered with an oil type substance to allow debris to cake to the cooling package radiator fins. Removing the battery box cover exposed a larger area of oil and debris collection.

At the front of the machine and opening the cab door showed a well-used area with some clutter interfering with entrance. The monitor displayed 899 hours on the machine with no active codes.

The mulching head was not attached to the 333G but was located nearby. Overall condition of the mulching head was unremarkable. The replaceable teeth however were in poor condition in need of sharpening if not replacement.

### **Maintenance/Operation**

Machine data reviewed through JD Link indicates that the machine was poorly maintained and operated contrary to instructions and warnings provided by the manufacturer, including indications that the machine was operated for long durations of time with warning lights being ignored. This is further supported through operating practices shown on social media videos.

### **Discussion/Analysis**

An operator has the option to choose how to approach a job with the machinery being operated. Keeping a machine running at peak performance requires the maintenance to support it. The sustainable operating range will change depending upon the health condition of the machine due to maintenance. Ignoring indicators of attention needed compounds future repairs needed. Maintaining proper system operating temperatures supports longevity as a machine is highly dependent on the maintenance and operation practices of the owner. Restricting air flow to the engine or through the coolers encourage higher temperatures which reduces performance and increases wear and premature repairs. Keeping air and fluids to the engine clean is essential. Lack of attention in significant areas will cause undesired results in unexpected areas.

Various areas of this 333G at the time of my inspection are indicators of induced repairs required.

### **Opinions**

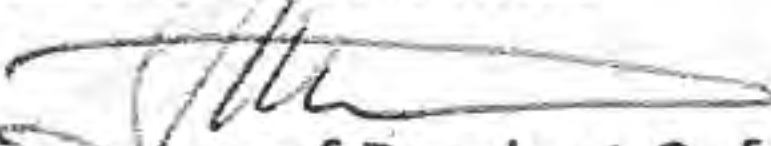

Based on materials reviewed, education, and industry experience, it is my opinion, to a reasonable degree of engineering certainty, that:

1. The 333G and mulching head attachment are not defective in design or manufacture.
2. The subject John Deere 333G machine in this matter has not been properly maintained.
3. Mr. Lacaze operated and/or allowed others to operate this machine without following the manufacturer's instructions and guidance.

4. The causation of the repairs in question are the result of improper maintenance and failure to operate in accordance with the manufacturer's instructions and guidance as well as imprudent industry operator practices and techniques.
5. Complaints of excessive downtime and repairs in this matter are not the result of product defects, but rather the result of Mr. Lacaze's actions or lack thereof.

Steven M. Wienkes

Manager of Product Safety

John Deere Construction and Forestry Company

#### CALIFORNIA

#### Proposition 65 Warning

Diesel engine exhaust and some of its constituents are known to the State of California to cause cancer, birth defects, and other reproductive harm.

If this product contains a gasoline engine:

#### **WARNING**

The engine exhaust from this product contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

The State of California requires the above two warnings.

Additional Proposition 65 Warnings can be found in this manual.

## Safety—General Precautions

### Avoid Static Electricity Risk When Refueling

The removal of sulfur and other compounds in Ultra-Low Sulfur Diesel (ULSD) fuel decreases its conductivity and increases its ability to store a static charge.

Refineries may have treated the fuel with a static dissipating additive. However, there are many factors that can reduce the effectiveness of the additive over time.

Static charges can build up in ULSD fuel while it is flowing through fuel delivery systems. Static electricity discharge when combustible vapors are present could result in a fire or explosion.

Therefore, it is important to ensure that the entire system used to refuel your machine (fuel supply tank, transfer pump, transfer hose, nozzle, and others) is properly grounded and bonded. Consult with your fuel or fuel system supplier to ensure that the delivery system is in compliance with fueling standards for proper grounding and bonding practices.

### Prevent Fires

**Handle Fluids Safely:** All fuels, most lubricants, and some coolant mixtures are flammable. Store flammable fluids away from fire hazards. Never refuel machine while smoking or when near sparks or flame.

**Clean Machine Regularly:** Keep flammable debris (trash, leaves, twigs, straw, etc.), grease, and oil from accumulating in engine compartment, around fuel lines, hydraulic lines, exhaust components, and electrical wiring. Never store oily rags or flammable materials inside a machine compartment.

**Maintain Hoses, Tubes, and Wiring:** Replace hydraulic hoses and tubes immediately if they begin to leak, and clean up any oil spills. Examine electrical wiring and connectors frequently for damage.

**Keep a Fire Extinguisher Available:** Always keep a multipurpose fire extinguisher on or near the machine. Know how to use extinguisher properly.

**Be Aware of the Operating Environment:** Airborne debris may contain sparks or embers. Do not operate near any flame.
